

Jaseela Noushad

Full Stack Engineer — React & Python

Jaseela1414@gmail.com | +1 (727) 309-2060 | Seminole, Florida, USA

PROFESSIONAL SUMMARY

Full stack engineer with hands-on experience building production web applications using React.js on the frontend and Python (Django, Django REST Framework) on the backend. Strong background in relational database design and optimization with PostgreSQL, RESTful API development, and real-time architecture using WebSockets and Redis. Comfortable owning features end to end — from database schema and API design through React UI implementation and deployment — while collaborating closely with clients and cross-functional stakeholders. Currently completing a BCA at Manipal University Jaipur (expected 2028).

CORE TECHNICAL SKILLS

Frontend (React-focused): React.js, Redux, Vite, JavaScript, HTML5, CSS3, Responsive UI, Django Templates

Backend (Python-focused): Python, Django, Django REST Framework, REST API Design, JWT Authentication

Relational Database: PostgreSQL, pgAdmin, Database Normalization, Indexing, Query Optimization

Real-Time & Messaging: WebSockets, Django Channels, Redis (caching & real-time communication)

Architecture: System Design, Modular Backend Architecture, Distributed System Fundamentals

DevOps & Tooling: Docker, Nginx, Gunicorn, Git, GitHub

Payments Integration: Razorpay

PROFESSIONAL EXPERIENCE

Full-Stack Developer (React & Python)

TechFifo Innovations | Feb 2024 – Apr 2026

Project: WorkNest (Job Portal)

- Built the frontend in React.js with Vite, delivering a fast, modular, component-driven UI.
- Designed and developed RESTful APIs in Django to power frontend-backend integration, including employer job-posting workflows.
- Implemented a PostgreSQL database with pgAdmin and configured secure, role-based authentication for employers and job seekers.
- Built real-time chat and notification features using WebSockets and Django Channels, with Redis for caching and real-time communication.
- Developed responsive React components with Redux for centralized state management, integrated with Django REST APIs.
- Optimized application performance and conducted end-to-end testing across the full lifecycle, from system design through deployment.

Stack: Python, Django, Django REST Framework, React.js, Redux, JavaScript, HTML/CSS, PostgreSQL, WebSockets, Django Channels, Redis, Razorpay

Project: SARAM (E-Commerce Platform)

- Implemented URL routing, view management, and product/category CRUD operations with soft delete and restore.
- Developed cart and wishlist logic with real-time stock checks; managed order processing, cancellations, returns, and refunds.
- Integrated Razorpay for secure payment processing.
- Generated graphical sales reports and order history views for business reporting.

Stack: Python, Django, JavaScript, HTML/CSS, PostgreSQL, Razorpay, Git

Freelance Full-Stack Developer (React & Python)

Self-Employed — Remote, Kozhikode, Kerala, India | Mar 2024 – Present

- Develop full-stack web applications independently for clients using Python, Django, PostgreSQL, and React, covering backend APIs, database design, and frontend development.
- Build scalable backend systems with Django and Django REST Framework, implementing REST APIs, authentication, authorization, and business logic.
- Deliver real-time features using WebSockets, Django Channels, and Redis for chat, notifications, and caching.
- Own the complete application lifecycle for each engagement — system design, database schema, backend/API development, React frontend, testing, and deployment — while communicating progress and trade-offs directly with clients.

Stack: Python, Django, Django REST Framework, PostgreSQL, React, Redux, WebSockets, Django Channels, Redis

ENGINEERING HIGHLIGHTS

- Built REST API systems supporting multi-module backend architecture, following modular design principles for scalability.
- Implemented a WebSocket-based real-time communication pipeline using Redis and Django Channels.
- Applied database normalization, indexing, and query optimization techniques on relational (PostgreSQL) databases.
- Worked in Docker-based development environments and debugged production issues involving CSRF, CORS, Redis, and WebSocket routing.

EDUCATION

Bachelor of Computer Applications (BCA) — Manipal University Jaipur | 2026 – 2028 (Expected)
